

Asbestos Management

Work safely & avoid illnesses by following the points below

Applicable if Asbestos Containing Materials (ACM) on site

Always:

- Be aware of ACM locations in your site. Many are labelled.
- Report damage to ACM immediately to prevent possible fibre release
- Remind contractors of ACM locations before they start work in any relevant area.

Remember:

- Asbestos is only a risk to health if asbestos fibres are released into the air and breathed in.
- Contractors must make themselves aware of ACM locations before starting any work in these locations

Note: All sites have had a risk assessment - any ACM identified is considered safe to leave in situ provided there is no damage
