### - 4.2 Most important symptoms and effects, both acute and delayed

Brodifacoum is an anticoagulant which may produce bleeding; this may be delayed for several days after exposure. If there is no active bleeding the INR (prothrombin time) should be measured on presentation and 48-72 hours after exposure. If the INR is greater than 4, administer Vitamin K1 (phytomenadione) 5-10 mg by slow intravenous injection (100 µg/kg body weight for a child). Treatment with phytomenadione (orally or intravenously) may be required for several weeks. The advice of the National Poisons Information Service (<http://www.npis.org/>) should be sought, particularly if active bleeding occurs.

### - 4.3 Indication of any immediate medical attention and special treatment needed

Antidote vitamin K1 (under medical supervision).

UK medical professionals should contact the National Poisons Information Service ([www.npis.org](http://www.npis.org/)) for further advice.

128-37-0 2,6-di-tert-butyl-p-cresol (BHT)	
NOAEL	500 mg/kg bw (rat)
NOAEL (developmental toxicity)	100 mg/kg bw (rat)
56073-10-0 brodifacoum	
developmental toxicity	Clear developmental toxicity was not observed in rabbits or rats. However, as a precaution, Brodifacoum should be considered teratogenic to humans because it contains the same chemical moiety responsible for the teratogenicity of warfarin, a known human teratogenic agent, and it has the same mode of action that is a known mechanism of teratogenicity in humans.

May damage the unborn child.

- **STOT-single exposure** Based on available data, the classification criteria are not met.

#### - STOT-repeated exposure

56073-10-0 brodifacoum	
Oral	NOAEL 0.04 mg/kg bw (rat) The study reveals that repeated oral exposure results in toxic effects: prothrombin time prolongation, kaolin-caphalin time prolongation, haemorrhage. Based on the results of the acute dermal and inhalation toxicity studies and route-to-route extrapolation, it is justified to assume a similar concern for serious damage to health by prolonged exposure through dermal and inhalation routes also.

May cause damage to the blood through prolonged or repeated exposure.

- **Aspiration hazard** Based on available data, the classification criteria are not met.
