

Scissor Lift

Work safely & avoid injuries by following the points below for every task

- Check before use for any wear & tear or excess movement – report any concerns to management immediately
- At no time are colleagues or visitors allowed to ride on the platform
- Do not exceed the **SAFE WORKING LOAD** of the lift (as stated on the lift)
- Before operating ensure nothing is blocking the machinery which would cause damage to the equipment or injury to the person operating the lift or anyone else
- When loading & unloading – ensure the platform is level with the floor
- Ensure the cage is stable on the platform before starting to raise or lower
- Ensure gates are fully closed and secure before operating the lift
- Raise the platform by pressing the “up” ↑ arrow on the control box until it is level with the upper floor level.

- Lower the platform by pressing the “down” ↓ arrow on the control box until it is level with the lower floor level
- In case of **emergency**, the lift should be isolated at the main power switch
